NIMBUS

Security &
Surveillance
Solutions

Designing Solutions That Protect

INTRUSION DETECTION SYSTEM

Security and surveillance is the most crucial aspect to overcome theft and vandalism in current business environment, whether it is internal or external. In order to get your operations protected, right security planning with seamless surveillance is mandatory.

Nimbus blue intrusion detection solutions are specially designed and committed to provide businesses the intrusion less surveillance. Our experts are dedicated to design and implement the right strategy with outstanding technical expertise to make your business 100 percent secure from all sorts of intrusions.

VIDEO SURVEILLANCE

Nimbus blue advance video surveillance solutions are structured to reduce crime and protect people and property. By keeping security as a primary objective our experts design, install, maintain and upgrade a wide range of Video Surveillance solutions to meet customers' specific needs and budgets
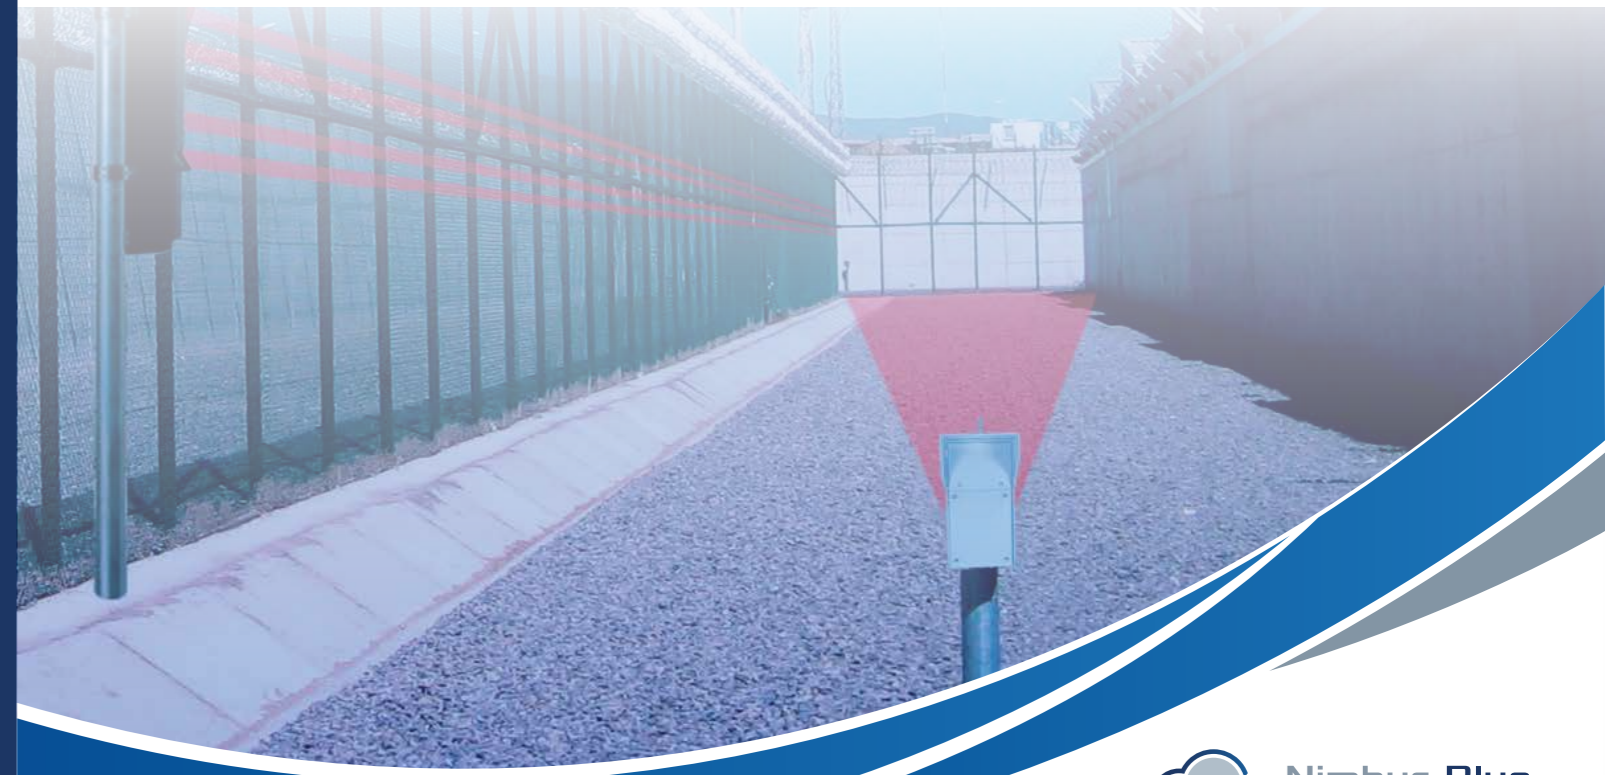

NETWORKING INFRASTRUCTURE

Nimbus blue networking infrastructure system aims to cover remote areas and provide high quality networking system over long distanced and challenging territories. The deployed solutions are the combination of right planning with right expertise to ensure reliability in deployed network.

DATA STORAGE AND SERVERS

Nimbus blue storage solutions aim to provide end users the complete support and ease to overcome the challenges pertinent to data storage, data loss and data up gradations. The designed solutions ensure reliability in data storage through high storage capacity.

In parallel to data storage solutions Nimbus blue provides state of the art communication and data connectivity through high end performance dedicated servers that ensures seamless flow of information with high speed. Our data servers' portfolio includes

- Computer based servers
- Blades servers
- Rack mount servers

DESIGNING SOLUTIONS THAT PROTECT

Nimbus blue security and surveillance division ensure maximum protection through intrusion less monitoring. Security threats are evolving rapidly so as security measures therefore, we at nimbus blue continuously working on research and development to design and implement the right surveillance solution to let you secure your business 24/7 365.

COMMITMENT

Security systems are becoming more and more important due to the increasing threats and information hacks. The idea of being safe and secure is a real time challenge for businesses.

Keeping in pace with the rapid evolving security challenges, Nimbus blue offers Next Generation security solutions so you can experience the true essence of what advance security & surveillance all about.

Whether it is a designing or up gradation of generic to the complex security & surveillance systems, our experts are the top notch names in the industry to deliver proactive, collaborative and intelligent solutions. Each solution ensures advance protection and minimal downtime with maximum access control over your security and surveillance goals. When privacy, security and real time transit information are at priority, Nimbus blue is the only name you can rely on.

Nimbus Blue
Infinite Possibilities

Intrusion detection system consists of the following tools

IP CAMERAS

In an ever more crowded and complex world, organisations are more aware of the need for security in business. Surveillance via system of digital cameras is also gaining popularity, and such systems can be surprisingly affordable. Such surveillance commonly uses internet protocol cameras that allow them to access and monitor their critical operations any where any time with single tap. Considering all the possible dynamics Nimbus internet protocol camera solution offers optimal image quality, forensic capabilities with image stabilization and automated noise alerts which helps you to take full control on eliminating uncertain security issues. Our IP camera solutions are the right blend of reliable products with game changer expertise to ensure, high quality recording, easy installation & quality compression for storage uptime towards endless monitoring.

INDOOR/OUTDOOR SENSORS

The advancement in infrared technology has addresses the wide variety of application in security and surveillance, which results in significant advancements of security and surveillance systems. One of the crucial components of security system is detectors and sensors.

Nimbus blue outdoor perimeter protection solutions consist of variable sensors that detect intruders as soon as a protected area is entered, and therefore before intruders are able to gain access to people or valuable objects and assets the infrared sensors combined with video surveillance system, provide a primary and fundamental layer of security by monitoring suspicious activities nearby perimeter boundaries, allowing dedicated operators to set up proper security measures accordingly. Our designed solutions ensure safety through reliable security systems including passive infrared, microwave and laser sensors.

COMMAND & CONTROL ROOM

Over the years, control rooms have been used by various enterprises for efficient and effective monitoring. Multiple streams of information allowing them to make faster and more accurate mission-critical decisions. One of the biggest challenges in command and control centres is the conversion of signals from multiple formats to a unified intelligible format.

We at Nimbus blue understand that your control room needs to track all defined events at any time with practically unlimited possibilities for control and a maximum overview to achieve high level of security. Whether it is large scale video wall that enables operators to acquire, control and analyze visual data quickly or multiple displays arranged in workstations throughout the room, Nimbus blue delivers an integrated control and command centre that let you focus on effective surveillance.

The designed solution has advance voice recording systems that provide a flexible and easy-to- use recording facility and can record conversations from any source, be it analogue, digital, wireless or IP, It can record all communications. Through advance intelligent keyboard you can ensure the fast switching between multiple screens in just one click. This also facilitates alarms to be triggered by user-defined independent events.

Nimbus blue Intelligent Video Analytics features are designed to support command and control room system to develop comprehensive security, intelligence and investigative capabilities using video tools. The advance video analytics features are aimed to provide you in depth monitoring to any incident letting you know about the suspect behind the incident with relevant forensic footage. Through automated surveillance action platform (ASAP) you can detect multiple objects by covering significant movement and obscuration. By incorporating VAS in your command and control room system you can actually optimise your surveillance operations with advance search features, redaction, and facial recognition in a crowd with very minimal detection time.

TOOLS
- Video wall
- Advance controllers

ACCESS CONTROL SYSTEM

All businesses whether small, medium or large have assets that need to be protected. Traditionally locks and keys are the pioneer tools to lock doors. But keys and locks can be copied easily that results in creating more security risks. Choosing the right access control system is a key decision for an organisation. The ideal system needs to match your requirements and be completely reliable with justified cost. Nimbus blue electronic access control system provides the most efficient and convenient way of securing your building

and assets, our development experts are focused on designing systems that are fit for your security purposes. By installing Nimbus blue access control system you can have centralised access through the doors, Secret PINs & access tokens are issued to allow access through the controlled doors, and are easily barred from the system if they are lost, stolen or just not returned by a visitor who leaves your organisation, barred tokens will not allow access through the controlled doors.

Our access control system also offer flexible control over users' access rights. For example, all staff can gain access through the main door of a building, but access to internal areas may be restricted to those who have a specific need to be there. Access may also be restricted by time, only granting access to particular users at certain times of day or night.

Our commitment in designing and delivering the quality control systems has resulted in our winning reputation for reliability and ease of use.

FEATURES

- Superior quality
- Extremely User friendly system
- Customisation at all extent

- Free access to software on multiple workstations
- Free software upgrades

PUBLIC ADRESS SYSTEM

Most Public Address systems is considered to be distributed reinforcement sound systems in that they provide real time amplification of an audio source to listeners in a served area using a number of individual speakers with almost all the buildings being equipped with a network infrastructure. Audio over IP technology has the huge advantage of utilising this existing network the internet to create a flexible public address system.

Nimbus blue public address system is designed and engineered to ensure clarity, uniformity and audibility whenever you are addressing to a certain audiences. Whether it is a small reinforcement system covering a meeting room to a large public systems. Our solutions provide the complete conveniences for optimal results.

Our public address solution offers IP Phone series to fulfil the different needs to enhance communication capabilities. It features wide band audio, noise cancellation and dynamic volume control combined to deliver high quality audio with crystal clear communication.

FEATURES

- Manage announcements with an all in one console.
- Configure multiple zones with User Friendly Interface.
- Integrate with other IT, Surveillance, PBX, Analogue

  audio systems.
- Install with ease using network cable or POE.
- Support for open standards - VAPIX, ACAP, SIP and VMS.

SUPPORT & SERVICES

Having high end expertise in securing your business operations, Nimbus Blue has capability to deliver comprehensive suite of security services and support, with our vast solutions portfolio we design recommend and optimise security and surveillance systems for intrusion less and real time monitoring enabling guaranteed protection from uncertainty.

Nimbus blue has not been restricted to design develop and execute the right security and surveillance solution but has proven it's brilliance in delivering state of the art services level. Our surveillance service level is the true mark of customer satisfaction ensuring maximum performance to your security system. Our experts are dedicated to present you the best security and surveillance service plans starting from security screening, consultation and designing.

CONSULTATION

- Security and surveillance infrastructure design evaluation
- Maintenance Reporting
- Recommendations for right security solution
- Facility security monitoring
- Inspection and testing

DESIGNING & IMPLEMENTATION

- Planning
- Installation/Up gradation
- Integration
- Commissioning
- Project Management

RADIO FREQUENCY IDENTITY SYSTEM

Leading businesses are implementing Item Intelligence as a foundational technology to attain businesses goals. By including RFID technology to their systems and products enterprises have witnessed the phenomenal results in businesses performances from every aspect. Nimbus blue RFID solutions consist of a diverse scope starting from inventory management that is the critical component of any business to product tracking enabling enterprises to make business processes and decisions smarter and reliable.

Nimbus blue RFID solutions is a comprehensive set of integrated hardware and software products on which businesses can develop RAIN solutions that systematically works on SCE principal (Software Connectivity End point) that ensures accuracy and reliability from very start to end in your daily business processes. SCE principal let you to simplify business management with power full item visibility and monitoring for real-time identification and location of RAIN tagged items. Our RFID solutions are the proven mark of quality and authenticity in Retail, Food and Medical industry by eliminating complications and optimising business benefits.

KEY BENEFITS

- Overall labour cost reduction
- Automated inventorying
- Better product consistency and quality
