WHERE PERFORMANCE MATTERS NIMBUS DELIVERS

Change is the only constant in modern business environment. The technological advances pose opportunities as well as threats to the operations. For the businesses to stay competitive the support infrastructure has to be robust agile and up-to-date. Delivering quality through innovation, your business performance is the key area of concern for Nimbus blue. "Our information and communication solutions are the one step forward towards operational success"

COMMITMENT

Nimbus Blue ICT division provides consulting services and technologies enabling businesses to achieve true business value through the use of Information Technology. We envision ourselves to be recognized as an innovative, effective and leading solution provider. At Nimbus there is no limit to excellence, we take pride in transforming problems into solutions.

Our team has been built on the same mantra, a perfect amalgam of expertise & knowledge to provide best-in-class solutions. Reap the benefits of contemporary solutions that break conventions; Nimbus Blue solutions are customised to cater a magnitude of enterprise needs from business operations to storage to security.

MISSION

We keep you operational 24/7 by delivering ultimate ICT solutions

Delivering quality through innovation, your business performance is the key area of concern for Nimbus blue. "Our

information and communication solutions are the one step forward towards operational success"

ENTREPRISE NETWORK SOLUTIONS

The business landscape has changed significantly with technologies being developed and depleted in no time; this has drastically reshaped the enterprise networks. The demand for high capacity, high performance networking has grown. There has been a shift towards integrated wired and wireless LAN infrastructures that are capable of providing coverage, security, scalability, mobility and a seamless communication experience.

Network becomes a competitive advantage when installed up to the industry standards, it enhances employee productivity and open new revenue streams for the business. Nimbus wired and wireless LAN solutions are secure, dependable and backed up by years of technical expertise.

WIRELESS LAN

Offering a wide range of Wireless LAN solutions for small, mid, and large enterprises, Nimbus blue solutions deliver the best in class in terms of functionality, ease of use and long term performance.

- Rapid adoption of smart devices
- High density networks with the integration flexibility and high speed
- Unified architecture across multiple locations

DISTRIBUTED ANTENNA SOLUTIONS

Nimbus DAS Solutions ensure a 5 bar cellular coverage for a seamless communication experience reliable wireless connectivity.

- Multiple operators, frequencies & Technology support
- Lower infrastructure, installation and operation costs
- Built around ever changing network architectures and technological advances

WIRED LAN

Nimbus wired LAN solutions keep information moving and connections strong for businesses, from SMB and Enterprise to Service Providers and Carriers.

- Comprehensive 10G/40G switch solutions
- Unified access, low latency, and open –architecture
- Pay-as-you-grow model with options for POE, non-POE & POE

ENTERPRISE COLLABORATION SOLUTIONS

Connectivity is at the core of all business operations. Agile & flexible communication solutions are imperative for collaboration & performance. Whether its a customer query or team communication, a seamless, reliable, cost-effective & sustainable communication & collaboration solution forms the backbone for effective business operations. Nimbus Voice portfolio is a perfect amalgam of steadfast, flexible & adaptable solutions that are bound to deliver unmatched performance.

CONNECTIVITY SIMPLIFIED

Ease of use, for a unified experience across multiple devices & applications.

CREDIBLE PERFORMANCE

Built for a multitude of services, Nimbus Voice Solutions offer server redundancy, local full-featured redundancy and networked systems options offer automated high availability for mission-critical communications.

COST-EFFECTIVES

Implement connectivity through top of the line technology solutions. Scalable virtual machines and networked systems cut costs and reduce upfront investment.

CUSTOMISED & FLEXIBLE MODELS

Scalable and open to adaptations to keep businesses future forward.

CUSTOMER-CENTRIC

Faster call routing & superior customer experience. Reliable call routing and group features connect external and internal contacts to experts.

FUTURE PROOF

Scaleable & open for adaptation

CARRIER NETWORK SOLUTIONS

The modernised business landscape requires a strong backbone to support manage and optimise operations. Nimbus Blue open-converged carrier solutions portfolio accommodates carrier-grade broadband access, telephony and data service interfaces in a single compact platform, enabling operators to offer value added broadband business services or migrate to Next Generation Network while maintaining the traditional telephony services.

HIGH SPEED GPON SOLUTIONS

High speed, durable, cost effective these are the attributes that define Nimbus GPON Solutions. Supporting Triple-play services with its high-bandwidth up to 1.25Gbps/2.5Gbps GPON is the choice of large carriers.

NETWORK CONSOLIDATION

Nimbus MSAN Solutions support business services, & transmission over Ethernet for a consolidated support infrastructure. Metro Ethernet Forum 1.0 & 2.0 Certified Solutions that leverage carrier Ethernet technology for a complete standard based delivery.

INCREASED SCALABILITY

Service driven architecture that enables scalability, there is Virtually no limit in the number of services.

END-TO-END SERVICE ASSURANCE

We develop solutions based on per customer, per service keeping Quality of service as the guiding rule.

LOWER CAPEX AND OPEX

Converged packet optical models reduce the complexities as well slashing the CAPEX/OPEX. Keeping customer focus we also offer flexibility through Pay-as-you grow expansion model.

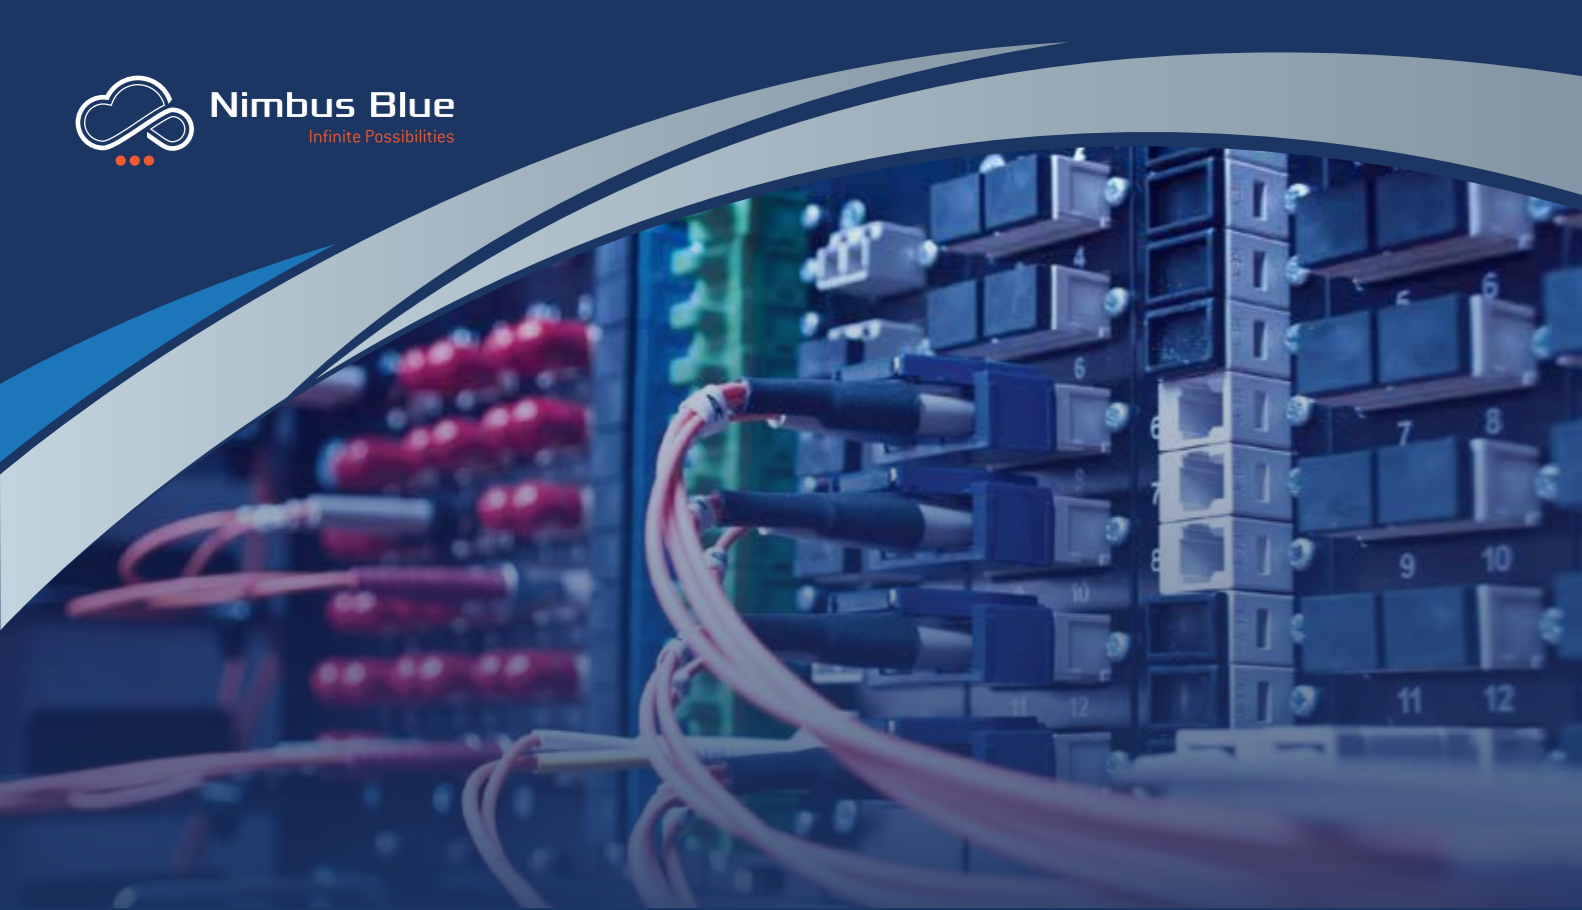

SERVICE MANAGEMENT

We have the capabilities to provide, monitor, maintain and optimize both Ethernet and MPLS transport protocols.

FORTIFIED SECURITY

Network security is guaranteed through the most current technology framework allowing flexible authentication mechanics of DHCP 82 and 802.1 xs.

CAMPUS CABLING SOLUTIONS

Today's competitive landscape is technology savvy and digitally demanding. Organisations exceedingly rely on their information technology infrastructure to impact their bottom-line: to increase market share, improve products & services and reduce operational costs.

Keeping businesses at the forefront of communication, Nimbus Blue has an extensive line of copper and fibre structured cabling solutions that deliver performance, scalability and reliability to evolving network needs. With in-depth understanding of every network architecture and physical layer infrastructure, Nimbus Blue network experts handle every aspect of network deployment, from design to installation, maintenance to up gradation. Having core focus on achieving customers' optimum networking performance and technological versatility, Nimbus Blue achieves this through intelligent connectivity plans, prompt deployments with greater scalability and customer service.

COPPER

- CAT 6 unshielded twisted pair solutions
- CAT 6 shielded twisted pair solutions
- CAT 6 outdoor LAN cables
- CAT 6A shielded twisted pair solutions
- CAT 6A outdoor LAN cables
- Universal accessories

CABLE MANAGEMENT

- Standing cabinets
- Wall mount cabinets
- Open racks

OPTICAL FIBRE

- Optical fibre cables
- Optical patch cords
- Optical pigtails
- Optical connectors
- Fast field connectors
- Optical adaptors
- PLC splitters
- Optical distribution frame (ODF) Tool kits

ENTREPRISE CYBER SECURITY

Information is the driving force behind today's connected world. With a massive amount of data exchanged everywhere around the world, information security is a major concern facing the modern enterprise. Escalating volume of sophisticated cyber-attacks worldwide that result in estimated \$400 billion in losses yearly question the need for more proactive enterprise security strategy. The security landscape is exponentially widening with the growing use of borderless network technologies in wireless, mobility and virtualisation. Forward-looking enterprises can no longer rely on single platform solutions for all round enterprise security needs.

Protecting enterprise networks through consolidated intelligent security frameworks, Nimbus Blue takes enterprise security with an architectural approach to security compliance, threat management and data loss prevention.

We at nimbus blue craft next-gen solutions that dynamically scaled with network complexity, disseminate threat intelligence and enhance network wide visibility to automatically respond to advanced cyber attacks for maximum network protection.

LARGE ENTERPRISES

- Next-Generation Firewalls
- Intrusion Prevention Systems (IPS)
- Endpoint Security
- Virtualized Next-Generation Firewall
- Secure Wi-Fi
- Application Delivery Controllers
- Security Subscriptions
- Sandbox
- Web Application Firewall
- Public Cloud Security
- Secure Switching
- Distributed Denial of Service (DDoS)
- Security Device Health, Performance, and Policy Management

- Email Security
- Security information and event management (SIEM)
- Cloud Access Security Broker
- Identity and Access Management

SMALL TO MID SIZE ENTERPRISES

- Unified Threat Management (UTM)
- Secure Wi-Fi
- Security management
- Secure Switching
- Email Security
- Web Application Firewall (WAF)
- Public Cloud Security
- Sandbox
- Endpoint Security
- Voice

ENTERPRISE SERVER & STORAGE

Exponential growth of digital content with data storage capacity growing unabated, businesses are facing new challenges when it comes to storing, sharing, and processing information. Traditional server and storage platforms are becoming obsolete with revolution in virtualisation and cloud computing posing scalability and performance challenges. Latest storage technologies make the case even more complex with interoperability for data centre managers struggling to catch up in maintaining predictable service levels, multi-tenancy, and security.

Maximising IT computing and storage with future ready server & storage systems, Nimbus Blue transforms traditional data centre storage systems into unified storage environments ready to converge and built to take over the cloud. As experts in data centre solutions, we create virtualised, cloud-based or hybrid solutions that help optimise workload and reduce your data centre footprint. Pushing data centre storage to the next level, we blend storage technologies that meet entry to enterprise level big data and cloud storage applications. While we deliver world-class data centre solutions, we ensure you get the same level of service when it comes to data centre consultancy, pre-sales and post-sales support throughout the product life. As a valued partner, we ensure business' behind the scenes success through reliable information storage and management

SERVERS

- Rack servers
- Blade servers
- Tower servers
- Integrated systems
- Systems management
- Ready nodes
- Data centre infrastructure

STORAGE

- Flash and hybrid storage
- Network-attached storage (NAS)
- Software defined storage
- Storage networking systems
- Storage automation & management

ICT SERVICES AND SUPPORT

Keeping up with that latest IT innovations for any business demands well sought-after assessment of current performance, capabilities and a comprehensive of organisation requirements. Whether optimising existing IT infrastructure or going for transformation, organisations need a reliable partner that does not only frame the technology but also successfully rolls out deployment without any interruptions.

Leveraging highly experienced expertise in information technology transformation, Nimbus Blue has capability to deliver comprehensive suite of services and support around our vast solutions portfolio. From integrating simple applications, data migration to implementing cloud solutions and rolling out critical infrastructure, we optimise IT systems from ground up enabling faster communication, secure network and lower total cost of ownership. With focus on the future, we design new infrastructure design with integrated scalability to make your systems future proof. With inevitable dependency on technology, Nimbus Blue's project management consultancy for every project and services contracts deliver a winning combination of IT for years ahead.

CONSULTATION

- IT infrastructure design evaluation
- Reporting
- Recommendations for right IT solution

DESIGNING & IMPLEMENTATION

- Planning
- Installation/Up gradation
- Integration
- Commissioning
- Project Management

TRAINING & CERTIFICATION

- Management
- Self-maintenance

TECHNICAL SUPPORT

- System Upgradation
- Preventive Maintenance
- Predictive Maintenance
- On-going technical support
- Service Scheduling
- Service Contracts
- Repair
- Replacements
